

AUTOMATED FIXTURING TRANSPORT PALLET

OVERVIEW

Automated transport pallets serve as a straightforward to integrate, flexible, and heavy-duty solution for unit under test handling and automated precision alignment needs. Test cycle efficiency is raised by allowing unit under test preparation outside of the test cell.

KEY FEATURES

- Custom engineered to interface with unit under test
- Stress analyzed for proper load handling and rigidity
- Flexible solutions tailored to specific unit under test or universal customer adaptation
- Turn-key system delivery
- Easily install and prepare unit under test anywhere in facility
- Automate in cell driveline, fuel, air and water connections
- Proven to handle and precisely align units up to 50 tons
- Access areas overhead crane cannot reach
- When paired with alignment pin docking system has proven to align within thousandths of an inch
- Precision machined surfaces and keyways pair with tooling to maintain high tolerance unit under test centerline
- Alloy steel alignment skid plates with polymer inserts allow long docking life span while protecting facility floor surfaces from damage
